DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character “650” has been used to designate both the hole (page 9, line 2) and the inner conductor (page 9, line 8). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 9-11, 13-17, and 19-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Boss (US 4,855,882).

4. Re claims 1, 9-11, 13, and 19: Boss discloses a first body part (58 in Fig. 2); a second body part (20) configured to resiliently mate with said first body part; said first and second body

Art Unit: 2875

parts configured to receive a pair of insulated conductors (28) therebetween; and apertures (40) in a direction orthogonal to said insulated conductors, said aperture configured to receive contacts (44); wherein said contacts are configured to penetrate an insulation layer of said insulated conductors (26 and 28) when said contacts are inserted into said apertures (See Fig. 3).

Re claims 14 and 20: Boss discloses the contacts are partially hollow (46).

Re claims 15-17: Boss further discloses a method of connecting the electrical connector in claims 1 and 9 (col. 3, lines 40+).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 2-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boss as applied to claims 1, 9, and 15 above, and further in view of Komai (US 6,017,241).

7. Re claims 2-3: Boss does not disclose a pair of channels configured to receive the conductors. Komai shows a pair of channels (17, 19, 21, and 23 in Fig. 1) configured to receive conductors. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Boss' body parts to include a pair of channels as Komai discloses in order to receive and hold the conductors conveniently.

8. Re claims 4-8, 12, and 18: Boss does not disclose a light emitting diode. Komai teaches a light emitting diode package is attached to a pair of conductor wires. Further, Komai suggested

the lamp holder is designed to mount either two types of lamps: a conventional incandescent lamp or an LED lamp (col. 4, line 27+). It would have been obvious to one having ordinary skill in the art at the time the invention was made to substitute Komai's light emitting diode with Boss' light source because of the Komai's suggestion above and such substitution would be within the level of ordinary skill in the art.
